1. Test Case Design

Registration

Test Case	Steps / Test Data	Expected Result	Type
REG-01	Enter valid registration details and submit.	Registration should be successful.	Positive
REG-02	Leave required fields empty and submit.	Validation messages should be displayed.	Negative
REG-03	Enter an invalid email format.	Invalid email should be rejected.	Negative
REG-04	Use an email that is already registered.	Duplicate registration should not be allowed.	Negative
REG-05	Enter a password shorter than the allowed length.	Password validation should be displayed.	Negative
REG-06	Enter the minimum allowed password length.	Registration should work if it meets the requirement.	Edge
REG-07	Enter the maximum allowed input length.	Value should be accepted if within the limit.	Edge
REG-08	Enter more than the allowed input length.	Input should be rejected or properly validated.	Edge

Login

Test Case	Steps / Test Data	Expected Result	Type
LOGIN-01	Enter valid registered email and password.	Login should be successful.	Positive
LOGIN-02	Enter valid email with wrong password.	Login should fail with an error message.	Negative
LOGIN-03	Enter an unregistered email.	Login should not be allowed.	Negative
LOGIN-04	Leave email or password empty.	Required-field validation should be displayed.	Negative
LOGIN-05	Enter an invalid email format.	Invalid email should be rejected.	Negative
LOGIN-06	Enter correct credentials and open the task section.	Task section should be accessible.	Positive
LOGIN-07	Enter wrong credentials repeatedly.	Application should handle the attempts without crashing.	Edge

2. Task CRUD Operations

Create Task

Test Case	Steps / Test Data	Expected Result	Type
CREATE-01	Create a task with valid details.	Task should be created and displayed in the list.	Positive
CREATE-02	Create a task with required information missing.	Task should not be created and validation should appear.	Negative
CREATE-03	Create multiple valid tasks.	All tasks should be stored and displayed correctly.	Positive
CREATE-04	Enter task data at the maximum allowed length.	Task should be created if within the limit.	Edge
CREATE-05	Enter task data beyond the allowed length.	Input should be rejected or validated.	Edge

View Task

Test Case	Steps / Test Data	Expected Result	Type
VIEW-01	Login and open the task list.	Tasks should be displayed correctly.	Positive
VIEW-02	Open task list when no task exists.	An appropriate empty-list message should be displayed.	Edge
VIEW-03	Create a task and then view the list.	The new task should appear.	Positive
VIEW-04	Refresh the page after tasks are created.	Saved tasks should still be displayed.	Positive
VIEW-05	Login with another user account.	Only that user's tasks should be displayed.	Negative

Edit Task

Test Case	Steps / Test Data	Expected Result	Type
EDIT-01	Select an existing task and change its details.	Task should be updated successfully.	Positive
EDIT-02	Edit a task and leave required information empty.	Update should not be allowed.	Negative
EDIT-03	Edit task using maximum allowed input.	Task should update if input is valid.	Edge
EDIT-04	Edit a task and save changes.	Updated details should appear in the list.	Positive
EDIT-05	Try to edit a task belonging to another user.	Edit operation should not be allowed.	Negative

Delete Task

Test Case	Steps / Test Data	Expected Result	Type
DELETE-01	Delete an existing task.	Task should be deleted successfully.	Positive
DELETE-02	Start deletion and cancel it.	Task should remain unchanged.	Negative
DELETE-03	Delete a task and refresh the page.	Deleted task should not appear again.	Positive
DELETE-04	Delete the only task in the list.	Task list should show the correct empty state.	Edge
DELETE-05	Try to delete another user's task.	Delete operation should not be allowed.	Negative

3. Input Validation & Error Handling

Test Case	Steps / Test Data	Expected Result	Type
VAL-01	Submit forms with blank required fields.	Proper validation messages should be displayed.	Negative
VAL-02	Enter only spaces in a task input.	Input should not be accepted as valid.	Negative
VAL-03	Enter data longer than the allowed limit.	Application should validate the input properly.	Edge
VAL-04	Enter special characters in input fields.	Application should handle the input correctly.	Edge
VAL-05	Use an invalid task ID.	A proper error should be shown instead of an application crash.	Negative
VAL-06	Cause a database/server failure during a task operation.	A suitable error should be shown and the application should remain stable.	Negative

4. Potential Bugs / Risk Areas

No.	Bug Description	Severity	Reason / Impact
1	A user can view another user's tasks.	Critical	Private task information may be exposed.
2	A user can edit another user's task.	Critical	Unauthorized changes can be made to another user's data.
3	A user can delete another user's task.	Critical	Another user's data could be lost.

No.	Bug Description	Severity	Reason / Impact
4	The same email can be registered more than once.	Major	Duplicate user accounts can cause account and login problems.
5	A newly created task disappears after refreshing the page.	Major	Task data may not be saved correctly in the database.
6	A deleted task appears again after refreshing the page.	Major	The delete operation may not be saved correctly.
7	Invalid input causes the application to crash.	Major	It can affect application stability and user experience.
8	Application shows success even though a task operation failed.	Major	User may believe data was saved when it was not.
9	Task input accepts data beyond the expected limit.	Minor	It may cause display or database-related problems.
10	A user can access task data without proper login.	Critical	Unauthorized users may access private task information.

5. Testing Approach

I would first understand the main user flow and test each feature one by one. I would test valid inputs as well as invalid and boundary inputs. I would also check that task data is saved correctly and that users can only access their own tasks. If I find a problem, I would record the steps, expected result, actual result and severity.
